

## ABSTRACT OF THE DISCLOSURE

A lounge chair having a seat portion, an adjustable back portion rotatable about a transverse axis through roughly a 90° angle from upright to flat, and an adjustable supporting means associated with the back portion.

The lounge chair comprises means manually accessible by a person while seated on the seat portion to lower the back portion through any desired angle, the means preferably comprising a lever extending from the side of the seating area to the adjustable supporting means conventionally associated with the back to engage and re-engage the supporting means to change the angle of the back.
